

How It Works

It's as simple as 1,2,3! Follow the steps shown to purchase or order your product. If you need further advice, speak to a team member at the Special Orders Desk in-store.

1. Select The Product You Want

View the range available in this brochure or online.
Use the number shown below to order your product.

Item #3690056

Item #3690059

Item #3690057

Item #0187242

Item #3690058

2. Order at the Special Orders Desk or Online

After you have selected the product you want, take this brochure to the Special Orders Desk or order online at bunnings.com.au

3. Get It Home

We Will Deliver

Delivery to your home or site can be arranged online or in-store when purchasing your products.

Pick-Up In-Store

If you decide to pick-up in-store and need help to get it home, you can:

- borrow a courtesy trailer
- hire a vehicle

Check with your local Bunnings store for availability.

DIY Instant Lawn

Available at
BUNNINGS
warehouse

Take This Brochure to the Special Orders Desk or order online at bunnings.com.au

Install your own turf | DIY

1 Measure

To calculate the lawn area (m²), measure the length and the width, then multiply these two figures together. For irregular shapes, divide area into smaller squares or triangles, calculate each space then add together. Each slab of lawn is approx. 0.5m², measuring approx. 1220mm x 410mm. 40m² of lawn will weigh approx. 1 tonne. When transporting orders greater than 30m² a tandem trailer with brakes is required, or a 1 tonne ute. Always ensure trailer regulations are adhered to.

Each slab of 0.5m² turf weighs approximately 10kg.

2 Preparation

The amount of preparation will vary from site to site. The more time and effort that is put into the site preparation, the better the end result will be. Do not lay lawn on top of existing lawn or weeds, apply weed killer then remove all desiccated grass and weeds. Cultivate (loosen) the soil to a depth of 100mm using a rotary hoe or pitch fork. Add new loam if required. To level the soil use a rake or straight piece of timber. This will give you a better end result and a more even mowing surface. The prepared area should sit 30mm lower than paths, driveways etc, allowing the lawn to sit flush with paths or paving.

3 Install

Lawn must be laid the day you receive it. Before laying ensure that the soil is damp and starter fertiliser has been applied evenly. (See fertilising for TifTuf recommendations). Start laying your lawn along a straight edge e.g. driveway. Stagger the joins in a brick-like pattern. If laying on a slope lay across rather than down the slope. Use pegs to hold your lawn in place if needed until the roots establish. Use a sharp knife or a shovel to shape lawn.

In-Store or Online

Minimum pre-order of 60 slabs (30m²). Delivery charges apply. Lawn is delivered on disposable pallets, please dispose of appropriately. Lawn will be delivered on customer's verge or driveway where accessible.

4 Water and Roll

Water lawn immediately after laying, ensuring every square metre of turf has been watered evenly. For the next 2-3 weeks water 2-3 times a day until the roots have established. The soil under the turf must be kept damp.

If watering with sub-surface irrigation you must water from above until the roots have established. Once the lawn has been laid and watered, roll lawn with a water filled or concrete roller. This will connect the roots with the soil. Establishment times vary from 2-3 weeks to 5-6 weeks depending on the time of year. The lawn is established when you can no longer lift off the ground.

5 Mow

Do not mow your lawn until the roots have fully established. We recommend to mow your lawn 3-4 weeks after laying. For the first mow just take the tips off. Never mow off more than one third of the leaf blade. Mowing can take place every 7-14 days during Spring and Summer. During Autumn and Winter about every 2-5 weeks or as required.

**TifTuf requires regular mowing. Mow as soon as the grass takes root to promote lateral growth (3-5 days after installation).*

6 Fertilise

For best results fertilise lawn 6-8 weeks after laying. Ensure you follow the instructions on the packet and water in well. For a healthy lawn fertilise at least once in September, December, March and once in early May.

**TifTuf has lower fertilising requirements. Starter fertiliser is not recommended during the warmer months (Sept to March). TifTuf requires less than 1/3 of the fertiliser than other lawns.*

**please note this is only a guide.*
